

**AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all prior versions of claims in the application.

1. (Previously presented): A mobile apparatus comprising:

a broadcast receiving function for receiving a television broadcast; and

a telephone communication function for performing a telephone communication, wherein

an audio output device comprising a left-channel audio output unit and a right-channel audio output unit, and

an audio processing circuit for outputting a left-channel signal of a television audio to the left-channel audio output unit and outputting a right-channel signal of the television audio to the right-channel audio output unit when a telephone communication is not performed and the television is viewed and listened to, the audio processing circuit further generating a monaural television audio signal from the left-channel signal and the right-channel signal of the television audio, outputting a monaural television audio using one of the left-channel and right-channel audio output units and outputting a telephone-received audio using the other audio output unit in the case of performing the telephone communication at the time of viewing / listening to the television, are provided.

2. (Previously presented): A mobile apparatus as claimed in Claim 1, wherein

a setting means for setting which of the audio output units is used for outputting the television audio and the telephone-received audio in the case of performing the telephone communication at the time of viewing / listening to the television, is provided.

3. (Currently amended): A mobile apparatus as claimed in ~~any one of Claims 1 and 2~~  
Claim 1, wherein

a sound volume ratio control means for controlling a ratio of sound volumes of the two audio output units in the case of performing the telephone communication at the time of viewing / listening to the television, is provided.

4. (Original): A mobile apparatus as claimed in Claim 3, wherein  
a setting means used by a user for setting the sound volume ratio is provided.

5. (Currently amended): A mobile apparatus as claimed in ~~any one of Claims 3 and 4~~  
Claim 3, wherein

the sound volume ratio control means controls the sound volume ratio so that the sound volume of the telephone-received audio is higher than the sound volume of the television audio.

6. (Currently amended): A mobile apparatus as claimed in ~~any one of Claims 1 to 5~~ Claim 1, wherein

a display device for displaying a television image and a telephone-received image and a display control means for displaying both of the television image and the telephone-received image on the display device in the case of performing the telephone communication at the time of viewing / listening to the television, are provided.

7. (Original): A mobile apparatus as claimed in Claim 6, wherein  
the display control means window-displays one of the television image and the  
telephone-received image in a displayed image of the other.

8. (Original): A mobile apparatus as claimed in Claim 6, wherein  
the display control means divides a display screen into two regions and displays the  
television image in one of the divided display regions and the telephone-received image in the  
other region.

9. (Currently amended): A mobile apparatus as claimed in ~~any one of Claims 7 and 8~~  
Claim 7, wherein

a setting means used by the user for setting sizes and display positions of the television  
image and the telephone-received image displayed on the display device is provided.

10. (Currently amended): A mobile apparatus as claimed in ~~any one of Claims 1 to 9~~  
Claim 1, wherein

the audio output device is an earphone or a headphone.
